

ECE 590/COMPSI 590

Special Topics: Edge Computing

IoT Meets the Cloud:
The Origins of Edge Computing

Monday January 13th, 2020

Duke UNIVERSITY

1

Last Class: Introduction to Edge

- Edge computing
 - Advantages: **latency**, **bandwidth**, **privacy**
 - Different devices
 - Different degree of application centralization

ANDREESSEN
HOROWITZ

- Research themes

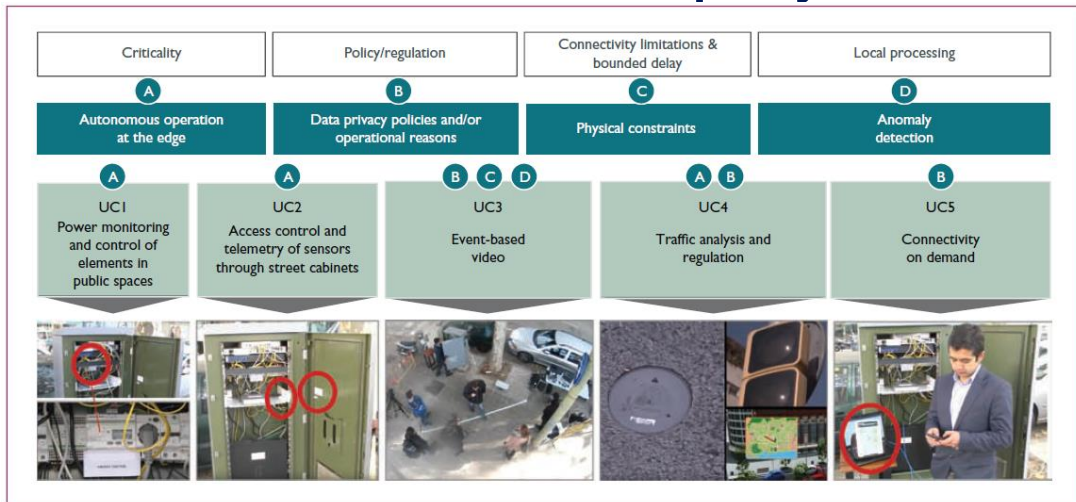

2

Duke UNIVERSITY

2

Barcelona PoC Deployment

A New Era for Cities with Fog Computing, Yannuzzi et al

3

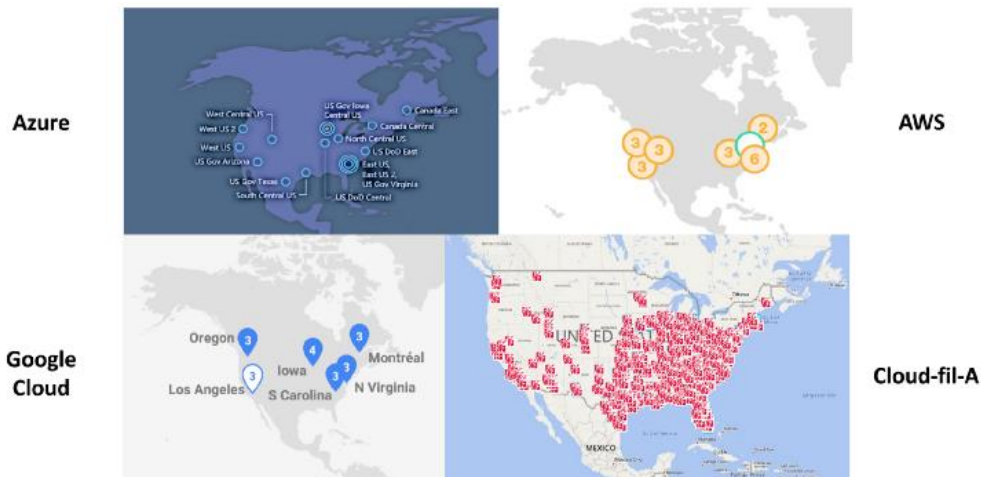

Edge Computing at Chick-fil-A (1/2)

July 2018

4

Edge Computing at Chick-fil-A (2/2)

5

Updates and the Quiz

- Posted several more papers for paper presentations
- **Quiz**

6

This Class

- Research projects and project proposals
- Path towards the edge: Cloud computing
- Path towards the edge: Internet of Things
- Modern multi-tier architectures

7

Does Anyone Have a Project Idea
They Want to Run by the Group?

8

Research Project Timelines: A Reminder

- Teams established: Friday **January 24th**
- Proposal due: Monday **February 10th**
- Progress report due: **Friday March 20th**
- Final presentations: **weeks of March 29th, April 5th, and April 12th**
- Final report due: **Friday April 17th**

9

9

Bonus Points: Connect Research Project to Duke

- 2 to 5 extra points

10

10

Research Project Proposal: An Overview (1/2)

- Describe your core idea
- Demonstrate that it is new
- Explain how you will validate it

11

Research Project Proposal: An Overview (2/2)

- Short
 - .. But, in many cases, **the most difficult part of the work**
 - Sets the direction for many weeks of work
- Integral part of research
 - Important skill to develop
 - Required for fellowship applications, ...
 - Faculty do day in and day out

12

Research Project Proposal: The Four Whys

- Why this?
- Why now?
- Why me?
- Why you?

13

Research Project Proposal: Structure

- Written proposal: 2-3 pages
 - Latex suggested but not required
- Components:
 - The core idea
 - Related work (“state of the art”)
 - How you will test your idea
 - Project plan
 - (Optional) How it helps Duke community

14

Research Project Proposal Components (1/3)

- The core of your idea
 - What are you proposing to do?
 - Please include **1-2 diagrams** to illustrate your idea
- Related work (“state of the art”), with an explanation of how your proposed work is different
 - 10+ citations
 - Related work in academia
 - Related work in industry

15

Research Project Proposal: Components (2/3)

- Describe how you will test your idea. Be as specific as possible.
 - Tools
 - Scenarios
 - Other solutions you will compare yours to

16

Research Project Proposal: Components (3/3)

- Project plan
 - Timeline: Describe what you will do *each week* between February 11th and April 17th
 - Risks: Describe the risks: what are the ways your project can fail? What will you do if the risks materialize?
- (Optional) How your project helps Duke community
 - Be specific

17

Research Project Proposal: Reviews

- Discuss with TA or instructor over upcoming weeks
- Present your proposal in class on **Wednesday February 12th**
 - 5-7 minutes, depending on the number of teams we will have
 - An informal presentation; use whatever means are necessary to convey your idea
 - Comment on the proposals of others
- Instructor and/or TA will give you additional suggestions, if any, by February 19th

18

Next Step: Progress Report: Due Friday March 20th

- Describe progress against the plan outlined in your proposal
- Provide an updated schedule for the work
- Also an integral part of research

19

This Class

- Research projects and project proposals
- Path towards the edge: Cloud computing
- Path towards the edge: Internet of Things
- Modern multi-tier architectures

20

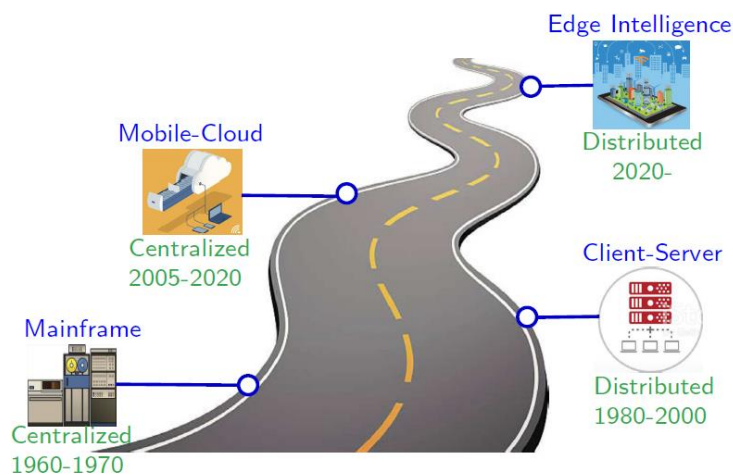

Edge: IoT Meets the Cloud

21

21

The Pendulum

22

22

The Cloud: Applications and Providers

- Amazon Web Services, Microsoft Azure, Google Cloud, IBM Cloud
- Virtual machines, of different grades
- An endless, always updating list of specialized services

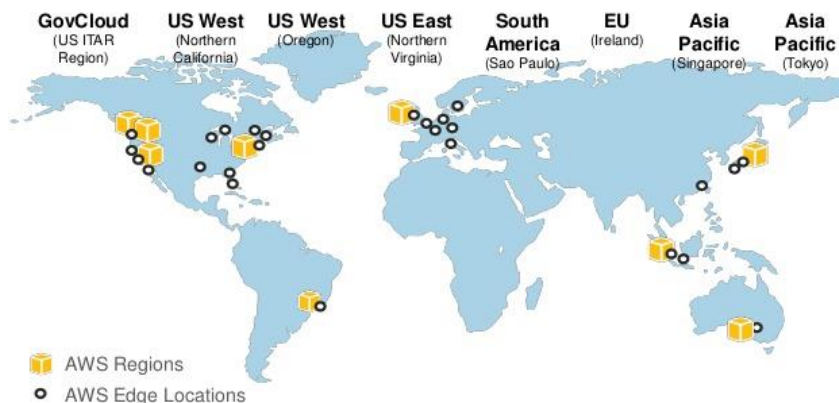

23

Duke UNIVERSITY

23

Cloud Centralization: AWS Example

AWS Global Infrastructure

24

Duke UNIVERSITY

24

Cloud Centralization: Microsoft Azure Example

25

Duke UNIVERSITY

25

The Cloud: Massive Operation (1/2)

26

Duke UNIVERSITY

26

The Cloud: Massive Operation (2/2)

27

Duke UNIVERSITY

27

The Cloud: Shared Substrate

- Shared servers
- Shared cores
- Shared network

28

Duke UNIVERSITY

28

Cloud: Some of the Properties

- Geographically centralized
- Massive, scalable
- Managed, physically secure
- Shared
- Cloud outages are uncommon
- ... but task latency variations are the norm
- ...

29

Side Note: Cloud as an Enabler of Vibrant Web Ecosystem

- Spurred innovation
- Perhaps, edge doing the same for the IoT?

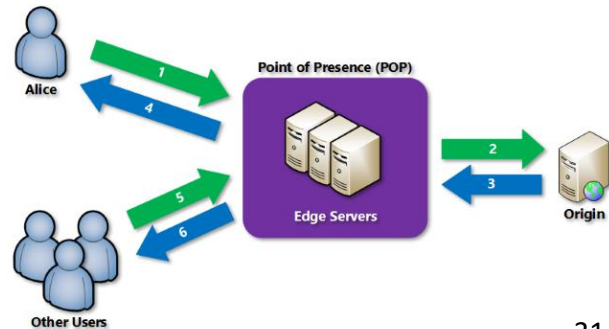

Overleaf

Duo for
Cloud

30

Edge Precursors: CDNs (1/3)

- Content Delivery Networks
 - Akamai, AWS CloudFront, Fastly
- Original “edge nodes”

31

Edge Precursors: CDNs (2/3)

- **Content** Delivery Networks - static content replication
- Fewer points than in edge computing settings
 - E.g., Akamai: ~200,000, AWS CloudFront: 100 POPs

32

Edge Precursors: CDNs (3/3)

- Interesting new development: using CDNs to customize web server responses
 - E.g., via Lambda@Edge
- Possible research project: extending CDN mechanisms to edge computing

33

Edge Precursors: Peer-to-Peer

- P2P: Napster, Kazaa, Bitcoin
- File sharing
- Focused on decentralization mechanisms above all

Server Based Network

Peer to Peer Network

34

Related Area, for Some Edge Research: Distributed Workloads on the Cloud

- ... and in multi-core systems
- Homogenous substrates
- Non-responsive operations
- Research projects on edge analytics need to be specific about the differences in their settings and traditional ones

35

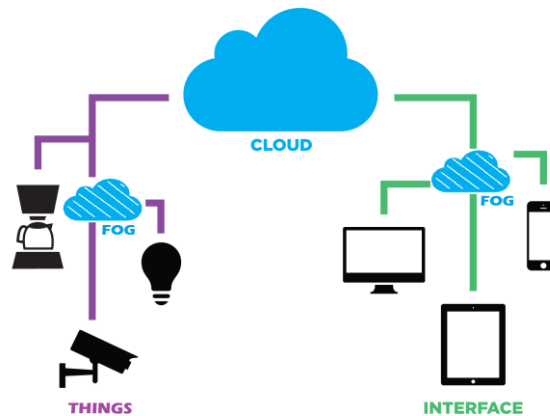

Intellectual Heritage: Distributed Clouds

AWS Global Infrastructure

36

Edge: IoT Meets the Cloud

37

This Class

- Research projects and project proposals
- Path towards the edge: Cloud computing
- Path towards the edge: Internet of Things
- Modern multi-tier architectures

38

History: Internet of Things

- Devices → smart devices → connected devices
 - Thanks, Moore's Law!

39

For Example, Towards IoT: Evolution of a Smart Watch

- CES 2016

40

Side Note: By Now, Modern Cars Are All Electronics

41

Duke UNIVERSITY

41

Side Note: Progress in the IoT is Limited by Energy Storage

- No Moore's Law for batteries

42

Duke UNIVERSITY

42

IoT Properties (1/3)

- Tightly constrained design space
 - Often specialized for the application
 - Proliferation of protocols and vendor-specific solutions

43

IoT Properties (2/3)

- Low computing capacity, e.g.,
 - Laptop: 2.4 GHz
 - Raspberry Pi: 1.2 GHz
 - Arduino Due: 0.084 GHz
 - Amazon Dash Button: 0.016 GHz
- Minimized/reduced energy consumption
- Difficult to secure
- ...

44

Edge Precursors: Mobile Ad Hoc and Sensor Networks

- Focused on sensing

45

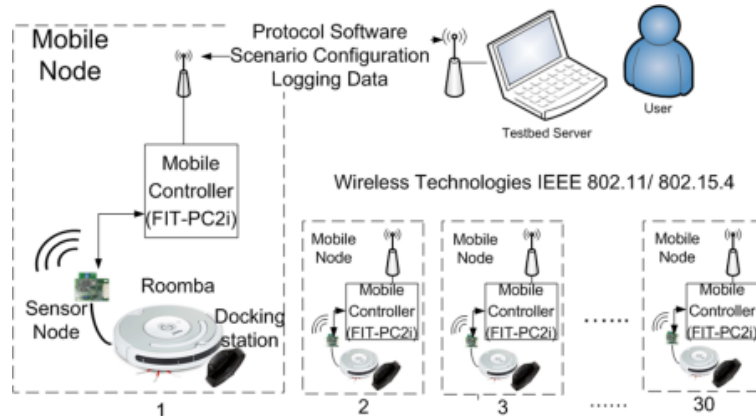

Sensor Network Example: ZebraNet

- Early 2000s

46

Sensor Network Example: RoombaNet

47

Duke UNIVERSITY

47

Sensor Networks: Focused on Multi-hop Connectivity

48

Duke UNIVERSITY

48

Industry Approach: 3-Tier Architectures Instead of Multihopping

- Sensors → gateway → cloud

49

Duke UNIVERSITY

49

Edge and Sensor Networks: Differences

- No consideration of the cloud
- No multi-point decision-making

- Research projects on resource discovery and peer assistance in edge need to be explicit about the differences in their settings and traditional ones

50

Duke UNIVERSITY

50

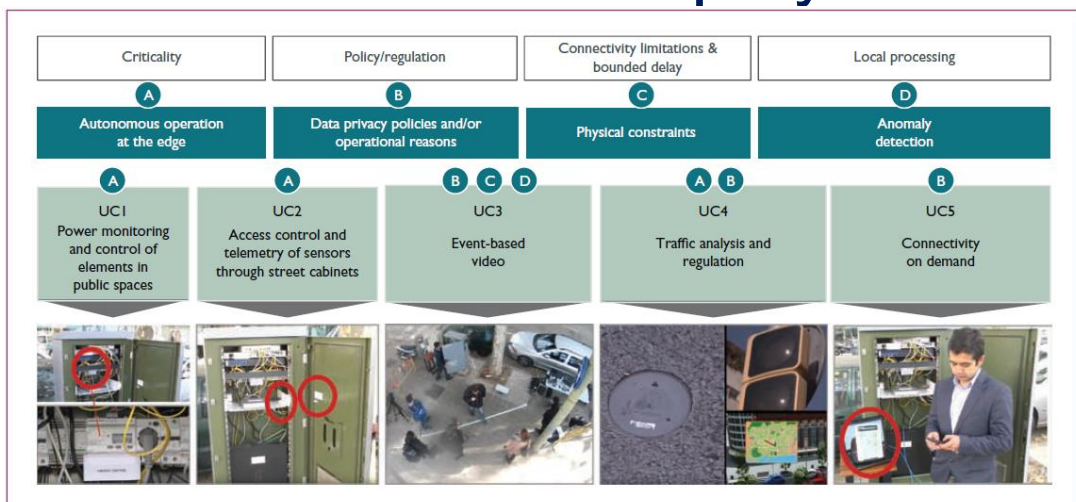

This Class

- Research projects and project proposals
- Path towards the edge: Cloud computing
- Path towards the edge: Internet of Things
- Modern and envisioned multi-tier architectures

51

51

Barcelona PoC Deployment

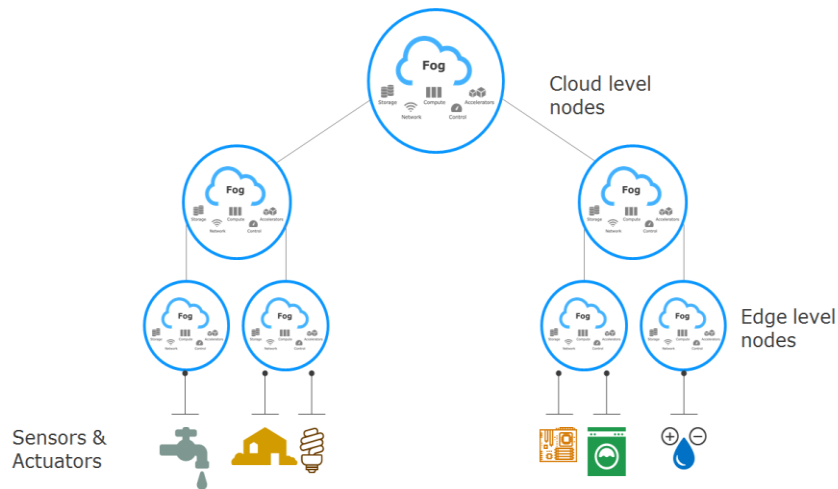

A New Era for Cities with Fog Computing, Yannuzzi et al

52

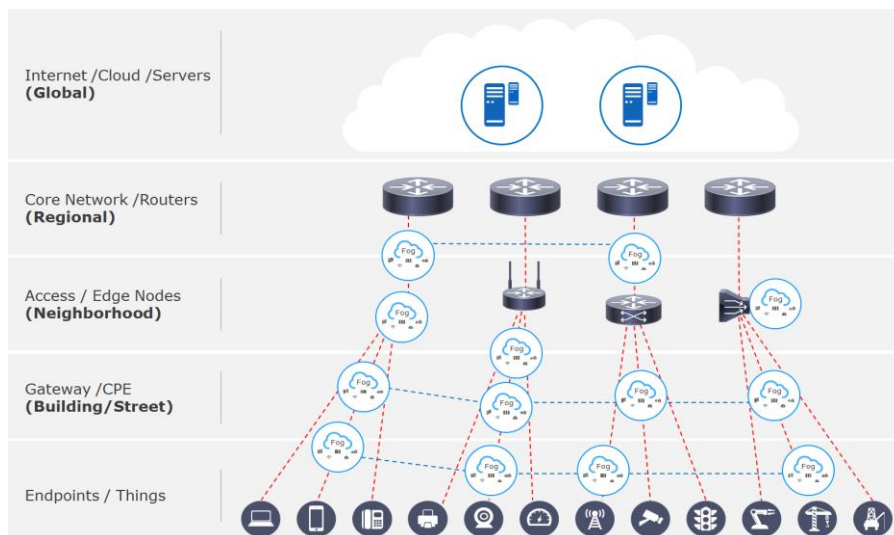

52

Multi-tier Architectures

53

53

Smart city fog deployment: buildings, neighborhoods, regions connected with each other

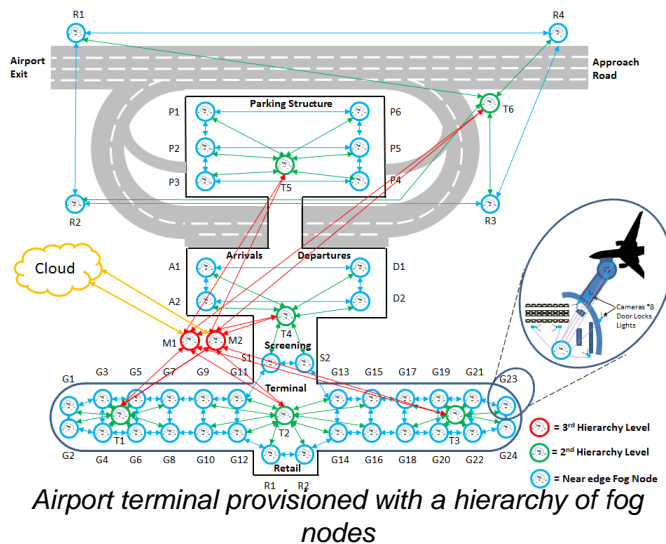

54

54

Example Use Case: Securing Air Travel

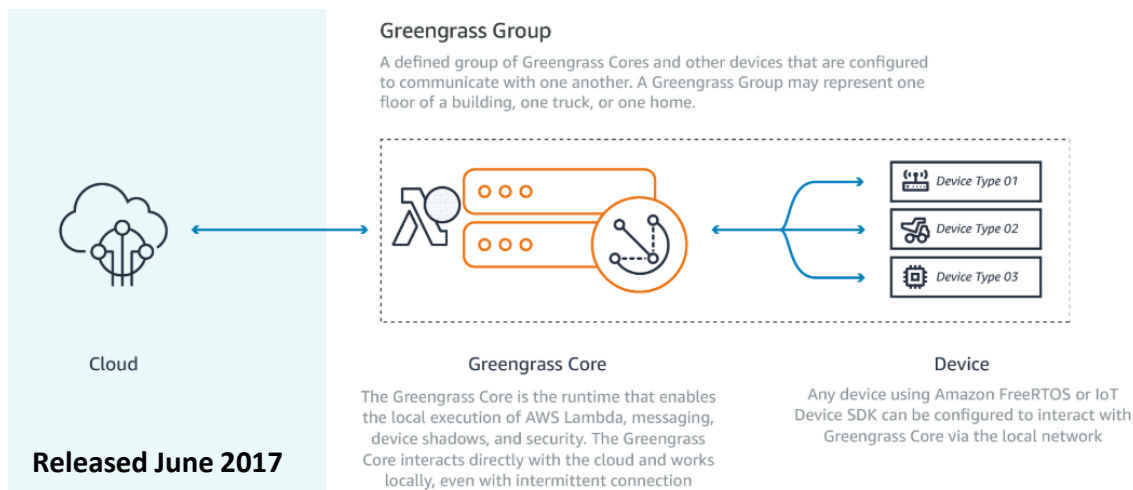

- Multiple locations need to work together
- Cameras important part of the system
 - 1 Tb/day/camera
- Immediate action needed
- Applications deployed: risk scoring, vehicle capture, baggage capture

Duke UNIVERSITY

55

Current Platforms: AWS Greengrass

56

Duke UNIVERSITY

56

Edge Properties

- Decision-making, actuation
- Data manipulations and transformations
- Heterogeneity
- Hierarchy
 - Cloud is involved in the system
- ...

57

Class Recap

- Project proposals
- Origins of the edge, on the cloud side:
 - CDNs, P2P systems
- Origins of the edge, on the IoT side
 - Sensor networks
- Properties of edge systems

58

Next Class and Homework (1/2)

- Topic: *Edge Helping the IoT*
- Readings for the class:
 - Introduction to AWS Greengrass
 - Description of a cloud outage that affected IoT devices
 - “Internet of Things has a Gateway Problem”
 - You and Your Research

59

Next Class and Homework (2/2)

- Pick a presentation date if you have not already
 - Presentation start on Wednesday January 29th
- Start going over references and thinking about ideas for your research project

60
