

RESEARCH PROFILE

My research goal is to advance computing systems that operate reliably in complex open-world environments and in close interaction with people, drawing on an in-depth understanding of human perception, attention, needs, and behavior. My current focus is on safe and robust augmented reality (AR) and human-centered spatial AI. This work spans the scientific and computer systems foundations of next-generation extended reality (XR) and immersive AI, as well as end-user applications in healthcare and human-robot collaboration (HRC). My lab develops new methods in edge AI, embedded sensing, wireless communications, and real-time system and application evaluation, with an emphasis on robust environmental and user-state awareness, runtime assessment and monitoring, and adaptive operation under changing real-world conditions. We work closely with domain experts to engineer systems that meet the needs of intended users and to move our technologies toward deployment in real-world settings.

At Duke, I lead the Duke I3T Lab, which includes nine Ph.D. students, one postdoctoral scholar, and more than ten additional research affiliates. I have secured over \$7 million in external research funding from NSF, DARPA, DoD, and industry sponsors, including over \$2.1 million since earning tenure in July 2025. My work has been recognized with the DARPA Young Faculty Award and DARPA Director’s Fellowship, NSF CAREER Award, Meta Research Award, IBM Faculty Awards, Cisco Research Award, and multiple ACM and IEEE best paper and research artifact awards.
